Very good. Thanks, Anne!

To clarify, these are all petcoke handling operations, correct? Not manganese or other raw materials.

**Hi Michael, here is the information about monitoring efforts surrounding bulk solid storage piles in Region 5.**

**Region 5 issued 20 Section 114 Information Requests requiring particulate matter ambient air monitoring to facilities handling petroleum coke. Three of the facilities moved forward with installation of the monitors: 1. KCBX, Chicago, IL; 2. Midwest Terminals, Toledo, Ohio; and 3. Rain CII Carbon, Robinson, IL. The remainder of the facilities either signed agreed orders with Region 5 to take actions to prevent fugitive dust or have been granted an extension while the company is in discussions with the Region.**

**All the information (114's and raw monitoring data) for KCBX can be found at our website: <https://www.epa.gov/petroleum-coke-chicago/kcbx-fenceline-air-monitoring-data>**

The remaining 19 Section 114 Information Requests issued are attached here, but we have uploaded all the Information Requests, the monitoring data from the two facilities (Midwest and Rain CII), and the agreed orders to the L Drive under the folder "*Petcoke*," then "*Chicago Tribune Request January 2017*."
